TelemetryTradeAI

The AI-powered Bloomberg for Retail Traders

Siddhant Bali | Raj Jaiswal | Deepak Sharma
DES 530 — Design of AI Products (DAIDP) | IIIT Delhi | 2026

Live Prototype: telemetry.sbali.tech

The Problem

BAI

The Modern Trader's Workflow is Broken and Risky

Information Overload

Drowning in news, social media signals, and complex financial filings (10-Ks, whitepapers) with no way to verify or synthesise it all.

Fragmented Tools

Juggling multiple subscriptions: TradingView for charts, AlphaSense for research, separate portfolio trackers. Disjointed and inefficient.

Hidden Risks

AI chatbots hallucinate financial answers with no citations or source verification — creating real monetary risk for traders.

Result: Hours wasted, wrong decisions made, money lost.

Value Proposition

BAI

For **retail traders in India** dissatisfied with **fragmented, hallucination-prone tools** — TelemetryTradeAI offers a **unified AI intelligence platform** that provides real-time charting, verified RAG research, and portfolio analysis — in one place.

4Us — Why This Problem Demands a Solution Now

Unworkable

7 open tabs to place one trade = missed opportunities and wrong decisions

Urgent

Markets move in seconds; slow, fragmented research equals lost money

Unavoidable

Research before trading is mandatory — every single time, without exception

Underserved

No Bloomberg equivalent for India's 192M demat account holders

Personas + Customer Journey

BAI

Persona 1 — Active Trader

Age 22–35, Tier 1 city, tech-savvy
Uses 4–5 tools daily before one trade
Pain: 2+ hrs research; fears hallucinated AI advice
Goal: Charts + verified research + portfolio risk now

Persona 2 — Small Fund / Quant

Age 28–45, finance/tech background
Manages portfolios programmatically
Pain: Bloomberg = $24K/year, no middle ground
Goal: API access to verified AI insights affordably

Customer Journey

Pre-Purchase

Googles crash → fragmented results → discovers TelemetryTradeAI → uses free charts

→

Purchase

Hits RAG query limit → sees cited AI value → upgrades to Pro ($10–30/mo)

→

Post-Purchase

Uploads portfolio screenshot → gets AI risk analysis → shares → word of mouth

The Solution + Future Vision

DAIDP

One platform replacing five tools. AI makes research fast, verified, and actionable.

Real-Time Multi-Asset Charting

- Stocks, crypto, forex on one chart
- INR/USD dual-currency overlay
- TradingView + CoinGecko live feeds

Verified RAG Research

- AI answers from whitepapers & 10-K filings
- Every answer has clickable citations
- No hallucinations — grounded responses only

Portfolio AI from Screenshot

- Upload any broker app screenshot
- OCR reads & structures portfolio data
- AI delivers risk score + diversification tips

Before: 3 hours across 5 tools, still uncertain **After:** 3 minutes, cited, confident, clear next action

Future Roadmap (Planned):

Anomaly detection • XAI confidence scores • Strategy backtesting • PDF research reports • News signal aggregator • Community features

AI Product Architecture

DAIDP

"A chatbot responds. An agent acts." — TelemetryTradeAI acts on live market data.

01 Model / Compute Layer

Where does intelligence come from?

Gemini API — LLM for RAG research & portfolio analysis
CoinGecko API — live crypto price feeds & market data
TradingView Widget — professional charting engine
Clerk — secure multi-auth (email + wallet)

02 Agent / Orchestration Layer

What should the AI do next?

RAG Pipeline — retrieves verified docs, cited answers, rejects hallucinations
OCR Ingestion — reads portfolio screenshots, structures tabular data
Multi-asset Engine — normalises prices across asset classes & currencies
Query Router — routes to charting, research, or portfolio analysis

03 App / Product Layer

What does the user experience?

Next.js 14 (TypeScript strict mode) — deployed on Vercel
AI Chat UI — streaming responses with inline source citations
Token Discovery Dashboard — sortable table, sparklines, auto-refresh 60s
Portfolio Analyser — sector exposure, asset distribution, risk suggestions

Market Opportunity

BAI

192M+

Demat accounts FY2025

+27% YoY • NSDL/CDSL

110M+

Crypto users in India

Highest globally • GVR

$54B

Crypto trading platforms 2025

→$200B by 2035 • FMI

$97B

AI in finance by 2027

Up from $35B • Brookings

Three Converging Forces

Explosive Retail Growth

30M new demat accounts/year since 2021. Only 14% population penetration — massive headroom.

AI Goes Mainstream in Finance

AI in financial analytics growing at 22–26% CAGR. No longer niche — now essential.

Asset Class Convergence

Stocks, crypto, forex lines are blurring. Traders need one unified platform.

Business Model

BAI

Freemium SaaS + API Monetisation — multiple revenue streams with a clear upgrade funnel.

Freemium	Pro	Portfolio AI	API Access	Enterprise
Free	**$10–30/mo**	**$8/mo add-on**	**$99–299/mo**	**Custom**
Basic charting + limited market data Build user base	Advanced charting Unlimited RAG research Multi-asset overlays	Screenshot OCR AI risk analysis Diversification tips	Programmatic access For quants & small funds AI insights via API	Data licensing Bespoke analytics For institutions

Competitive Moat

- Verified RAG pipeline on financial documents — technically non-trivial to replicate quickly
- OCR portfolio ingestion — not available in any Indian retail trading tool today
- Multi-asset platform (stocks + crypto + forex) — Multibagg.ai is stocks-only
- India-native: INR/USD dual display built for the 192M demat account base

Competition

BAI

Every competitor does one thing well. TelemetryTradeAI does all of them — with a verified AI layer none have.

Tool	Charts	RAG Research	Portfolio AI	XAI	Multi-Asset
TradingView	Yes	No	No	No	Yes
AlphaSense	No	Yes	No	No	No
Multibagg.ai	Yes	Partial	No	No	No
ChatGPT	No	Partial	No	Partial	No
TelemetryTradeAI	**Yes**	**Yes**	**Yes**	**Yes**	**Yes**

Multibagg.ai proves Indian market demand exists — their stocks-only focus is our white space.

Business & Strategy

What We Built

- Live prototype deployed on Vercel since November 2025
- Real user signups active
- Working: real-time charts, Gemini AI chatbot, INR/USD switcher, Clerk auth
- Full RAG pipeline + portfolio OCR are next build phases

Stack: Next.js 14 | TypeScript | Gemini API | CoinGecko | TradingView | Clerk | Vercel
