Prompts

AE BFS

```
Generate a structured glossary of key terms and concepts from Applied
Ethics and Philosophy, based strictly on the assigned readings. For each
entry, include: (a) a concise but academically precise definition, (b) the
main philosopher(s), school of thought, or tradition linked to the concept
as presented in the readings, and (c) at least one case study, thought
experiment, or real-world example drawn directly from the readings that
illustrates the concept in practice. Organize the output in three columns —
Term/Concept → Definition & Key Thinkers → Case Study/Example — with enough
detail to serve as a compact academic cheat sheet. Ensure coverage of both
theoretical foundations (ancient, modern, contemporary ethics) and applied
issues (e.g., bioethics, justice, rights, global challenges) as they appear
in the reading material.
```

CM Notes

```
Create super depth notes in Markdown (.md) format with 100% information
preserved, no loss. Use simple grammar and keep everything clear, direct,
and well-structured. using headings, subheadings,paragraphs, statements and
code blocks when needed. Include every detail, definition, example, and
step exactly from the source. transform the given content into clean,
readable .md format.
```
